SLACK EXPORT — #p1-incident-channel

Date: 3-Jun-2026 to 4-Jun-2026 (London local time, BST = UTC+1)

Export reason: Post-Incident Review for INC104821

customer-success-lead · 21:58 BST

fyi — getting pings from Mumbai branch managers, users complaining about CoreBanking logging them out. 20+ calls in last 10 min to the branch helpdesk.

incident-bot · 22:04 BST

■ P1 alert triggered: CoreBanking-X1 auth-svc 401_rate exceeded threshold (currently 1.8%, baseline 0.4%)

priya.l — L1 Ops · 22:12 BST

On it. Pulling up dashboards now.

priya.l — L1 Ops · 22:18 BST

This looks network-related, I am seeing some latency spikes. Pulling in networking team.

priya.l — L1 Ops · 22:24 BST

L1 escalated to us, they think it's network — I'm not convinced yet, let me check the auth logs

arjun.m — Platform · 22:38 BST

auth-svc 401_rate is up — currently 2.4%, baseline 0.4%. Need to see what changed in the last few hours.

network-team-oncall · 22:42 BST

Checked edge routers, backbone. Nothing anomalous. Not network at our layer.

arjun.m — Platform · 22:48 BST

Also seeing elevated session_refresh_failure_rate. That is specifically a token-renewal signal.

karen.z — SSO Vendor Liaison · 22:55 BST

Vendor reports no outage on their side. API latency is normal.

incident-commander · 23:02 BST

Pulling in executive bridge. @vp-digital-banking fyi.

arjun.m — Platform · 23:12 BST

Opened INC104821.

d.menon — Platform · 23:18 BST

Let me check recent changes in last 6 hours.

d.menon — Platform · 23:26 BST

there's a CHG20641 from earlier tonight, session TTL related?? need to check with the requester

incident-commander · 23:30 BST

@v.krishnan — are you around? CHG20641 context please.

v.krishnan — Identity Svcs · 23:34 BST

Yes present. CHG20641 was approved by CAB today at 15:00 UTC. SSO TTL change 60→15 min. Deployed at 22:10 UTC per plan.

arjun.m — Platform · 23:36 BST

That's it. 22:10 deployment, 22:14 symptoms start. TTL at 15min is causing the token-refresh storm. Rolling back.

arjun.m — Platform · 23:42 BST

Confirmed CHG20641 reduced SSO_TOKEN_TTL from 3600 to 900 seconds. That is likely our issue.

incident-commander · 23:52 BST

Rollback plan approved. Executing.

arjun.m — Platform · 00:05 BST

Rollback complete. SSO_TOKEN_TTL back to 3600. Monitoring 401_rate.

arjun.m — Platform · 00:20 BST

401_rate trending down — 1.2% currently (from 3.2% peak)

arjun.m — Platform · 00:35 BST

401_rate at 0.5% — effectively recovered. Baseline is 0.4%.

incident-commander · 00:46 BST

INC104821 resolved. PIR scheduled for 5-Jun 10:00 UTC. Thanks all. ■

vp-digital-banking · 00:50 BST

Please attach the CHG review notes to the PIR package. We need to understand how the CAB missed this.
