CHANGE REQUEST

CHG20641 — Enhanced SSO Security Posture — CoreBanking-X1

Change ID	CHG20641
Change Type	Standard — Configuration
Change Category	Authentication / Session Management
Submitter	V.Krishnan, Senior Engineer, Identity Services
Business Owner	VP, Digital Banking (acknowledged)
Target Window	Friday 3-Jun-2026, 22:00 – 23:00 UTC (03:30 – 04:30 IST, 4-Jun)
Risk Rating (self-assessed)	Medium
Blast Radius (self-assessed)	Low — single configuration parameter change
Rollback	Yes — revert config flag SSO_TOKEN_TTL to 3600
Rollback Tested	Yes — in UAT 1-Jun-2026
Business Justification	Internal audit recommendation ISA-2026-042 — reduce session TTL from 60 minutes to 15 mir
Compliance Reference	ISA-2026-042; RBI Cyber Security Framework §6.2

1. Technical Description

The CoreBanking-X1 authentication service (auth-svc) currently issues SSO tokens with a time-to-live of 3,600 seconds (60 minutes). This change updates the configuration parameter SSO_TOKEN_TTL from 3600 to 900 (15 minutes). Config change is applied via orchestrator-driven config reload; no application restart required.

2. Impact Assessment (as submitted)

Impact to user experience is assessed as LOW because token refresh is handled transparently by the client library in CoreBanking-X1. Users will not see any functional change. The only observable effect is more frequent silent background token refresh.

3. Testing Performed

UAT in staging environment on 1-Jun-2026 with 50 synthetic user sessions over 2 hours. All refreshes completed successfully. No session interruptions observed.

4. CAB Review Section (to be completed by Change Advisory Board)

Scheduled for CAB review: 3-Jun-2026, 15:00 UTC (20:30 IST). CAB chair: K.Patel. Required attendees: Change requester, Business owner, Risk officer, Service owner.

5. Additional Context (Not Flagged by Submitter — but relevant for CAB)

[Note for facilitator: a well-designed CAB review would surface the following, which are NOT in the submitter's assessment:]

• Tier-1 client Coastal Retail Banking is in quarterly financial close window (28-Jun to 15-Jul-2026). Any authentication disruption during this window has elevated client-impact weight.

• Prior unresolved historical incidents INC98213 (15-Mar-2026) and INC101090 (28-Apr-2026) on CoreBanking-X1 had session-timeout symptoms with no documented permanent root cause. Change to SSO TTL may interact with the underlying undiagnosed issue.

• UAT tested with 50 synthetic sessions. Production load is ~12,500 concurrent sessions. Test coverage may be insufficient to detect token-refresh storm effects at scale.

• No session-impact assessment is required under the current CAB template for 'routine configuration tweaks.' This is a gap worth noting.

6. Approvals Required

Role	Name	Decision	Date
Change Submitter	V.Krishnan	Submitted	2-Jun-2026
Service Owner	A.Deshmukh	Pending	
Risk Officer	N.Kaur	Pending	
CAB Chair	K.Patel	Pending
