Incident Report — Service Degradation

Vendor: PaymentsGrid Inc. · Service: PG-Core Payment Processing API

Incident Ref: PGI-2026-09-22-001 · Issued: 25-Sep-2026 · To: Enterprise Customers

Executive Summary

On 22 September 2026, PaymentsGrid experienced a 6-hour 18-minute service degradation affecting the PG-Core Payment Processing API in the APAC region. During the incident window (14:12 to 20:30 IST), customer transaction success rates dropped from the baseline 99.6% to 72%. Full service was restored at 20:30 IST. Root cause has been identified and remediated.

Impact Summary

Service	PG-Core Payment Processing API (APAC)
Duration	6 hours 18 minutes
Peak error rate	28% (vs baseline 0.4%)
Affected transactions	~2.3M attempted
SLA Impact	99.5% monthly uptime commitment breached; current month uptime 99.08%
Affected customer tiers	Enterprise Platinum, Enterprise Gold
Regions impacted	India, Singapore, Australia, Japan, South Korea

Root Cause

A configuration change (CHG-PG-2026-0922) deployed at 14:08 IST to the APAC region's transaction routing layer introduced an infinite retry loop under specific error conditions. The retry loop exhausted the backend thread pool, causing cascading timeouts. The change passed internal pre-production testing but was not caught by canary deployment due to a telemetry gap in the retry-counter metric.

Resolution

The configuration change was rolled back at 20:12 IST. Service recovery completed at 20:30 IST. Telemetry gap has been addressed. Full RCA report available on request.

SLA Credit

Per Enterprise Service Agreement §9.3, affected customers are entitled to SLA credit equivalent to 15% of the monthly service fee for the affected month. Credit will be applied to the September 2026 invoice. Enterprise customers requiring additional recovery assistance should contact their Customer Success Manager.

Customer Communications Timeline (actual)

Time (IST)	Communication
